How to use the RPC Endpoint Connection?

1.) First Check if your Node is synced
//Highlight the Node Sync Status

Next / Back

2.) Click on the "OFF" button to open your Port
//Highlight the OFF Button

Next / Back

3.) You can now click on the execution client button (in our case "GETH") to copy your RPC URL.
//Highlight the GETH Button

Next / Back

4.) You can set up a dAPP or Wallet that supports a RPC Endpoint Connection, with your copied RPC URL. After that you can start sending transactions with your own node.

Next / Back

5.) If you are done, DON'T FORGET to close your port by clicking on the "ON" button. When the text "tunnel closed" appears, you have closed your port.
//Highlight the "ON" Button and after that the text "tunnel closed"

Finish / Back
